## Comparison of viral production calculation

Population: c\_Viruses; Calculation method: all linear regression variants

## Kruskal-Wallis Test: Linear Methods Mean

$$\chi^2_{\mathsf{Kruskal-Wallis}}(4) = 2.38 \text{e} - 03, \, p = 1.00, \, \hat{\epsilon}^2_{\mathsf{ordinal}} = 1.59 \text{e} - 05, \, \mathsf{Cl}_{95\%} \, [2.47 \text{e} - 03, \, 1.00], \, n_{\mathsf{obs}} = 150$$

## Kruskal-Wallis Test: Linear Methods SE

$$\chi^2_{Kruskal-Wallis}(4) = 1.80, \, p = 0.77, \, \hat{\epsilon}^2_{ordinal} = 0.01, \, CI_{95\%} \, [7.24e-03, \, 1.00], \, n_{obs} = 132$$
